

Project Executable Files

Date	30 September 2026
Team ID	SWTID-2026-6777
Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for the project. Files are organized so the evaluator can run the solution using the provided instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files	NA - no database in current MVP
5	Environment configuration file	Yes - secret keys not committed
6	Deployed application URL	NA - local submission
7	APK / Executable binary	NA - web application
8	Dockerfile / Containerization config	NA - not included
9	Test files and test results	Yes
10	Demo video or walkthrough	To be provided

Project Executable Files

Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for the project. Files are organized so the evaluator can run the solution using the provided instructions.

Step 2: File / Folder Structure

ComicCraft repository structure:

Path / File	Purpose
main.py	FastAPI app, routes (/ and /generate), validation, HTML rendering
templates/	Web interface pages: landing page, story form, and generated comic view
static/	Responsive styling and front-end assets
tests/	FastAPI endpoint tests and module-level tests
.env	Local environment configuration (API keys; not committed)
requirements.txt	Python dependencies
README.md	Setup and project documentation

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not deployed; currently run locally at http://127.0.0.1:8000 .
Login Credentials (Demo)	Not required for current MVP.
Platform / Hosting Provider	Local Python + FastAPI + Uvicorn.
Repository Link	To be added.
Demo Video Link	To be added for final demonstration.

Project Name	ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for the project. Files are organized so the evaluator can run the solution using the provided instructions.

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run the project locally:

1	Install Python 3.x and open a terminal in the ComicCraft repository.
2	Create and activate a virtual environment.
3	Install dependencies: <code>python -m pip install -r requirements.txt</code>
4	Create <code>.env</code> and set <code>GEMINI_API_KEY</code> (live AI keys are optional; the demo studio works without them); never commit secret keys.
5	Start: <code>uvicorn main:app --reload</code>
6	Open <code>http://127.0.0.1:8000</code> in a browser.
7	Enter a story idea, main character, setting, mood and art direction, click Make my comic, and review the 5-frame comic. Test Download your comic and Make another.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Live Gemini generation needs a valid API key and internet access; without keys the app runs in demo mode with locally generated preview text and sample art.	Configure <code>GEMINI_API_KEY</code> locally.
2	Performance metrics depend on the execution environment.	Run load tests before reporting numeric results.
3	Live comic art generation needs an additional image-service key.	Add the key in <code>.env</code> , or use the demo studio's sample art.
