

Project Details

Project

Project Name: ComicCraft - AI Comic Story Creator using Gemini Models

Team ID: SWTID-2026-6777

Date: 30 September 2026

Assessment

Maximum Marks: 1 Mark

Reviewers: Project evaluators and academic reviewers

Branding

SmartBridge / SkillWallet

Placement preserved per reference template

Demonstration Overview

This page documents the demonstration status for each proposed ComicCraft feature. Each row lists the feature, a concise description, current implementation status, whether it was demonstrated, and remarks summarizing test evidence.

Feature Checklist

S.No	Feature Name	Description	Status	Demonstrated	Remarks
1	Story Idea Intake	Collects the story spark, main character, setting, story mood, and art direction through the Creator's Desk form.	Implemented	Yes	Tested through the ComicCraft story form, including the live character counter and Try a fresh spark.
2	Five-Frame Story Generation	Turns the story idea into a titled five-frame comic story built around the main character and setting.	Implemented	Yes	Tested with the Fern and the Moonlit Forest story; five frames were generated.
3	Narration and Dialogue	Writes narration, a tagline, a scene description, and character dialogue for every frame.	Implemented	Yes	Narration and dialogue shown on each frame card of the result page.
4	Scene Art and Image Prompts	Provides art for each frame and the image prompt used to describe it.	Implemented	Yes	Demonstrated with sample art and See image prompt; live art needs an image-service key.
5	Demo Studio Mode	Generates preview text and sample art locally so the app runs without API keys.	Implemented	Yes	Demo studio notice and local demo story shown on the result page.
6	Web-Based Comic Interface	Provides a landing page, story form, and comic view with Download your comic and Make another actions.	Implemented	Yes	Integrated with the FastAPI backend and tested locally.

Feature Implementation Summary

Metric	Value
Total Features Proposed	6
Total Features Implemented	6
Total Features Demonstrated	6
Overall Implementation Rate (%)	100%

Notes on Demonstration

The demonstration included live interactions with the ComicCraft frontend and generation requests to the FastAPI backend. The captured screens were produced in the demo studio, where preview text and art are generated locally; live Gemini generation is enabled by configuring API keys. Representative story ideas were used to check that each comic is complete and easy to read.

Compliance and Academic Integrity

Generated stories were reviewed for clarity and appropriate content. API keys are kept in environment configuration and are never committed to the repository. ComicCraft needs no account, and each story stays on the user's device during demonstrations.

How to Reproduce

1. Get the ComicCraft repository and install dependencies.
2. Start the FastAPI server (live Gemini keys are optional; the demo studio works without them).
3. Open the web interface locally and create a comic end-to-end, from story spark to the five-frame result.
4. Refer to the test cases and the Performance Testing document for verification evidence.
