Team ID SWTID-2026-6777
Project Name ComicCraft - AI Comic Story Creator using Gemini Models
Maximum Marks 5 Marks

Coding & Solution

This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission demonstrates working functionality, clean code practices, and alignment with your defined requirements.

Instructions:

1. Ensure the code is well-structured, commented, and follows best practices for the chosen technology stack.
2. The solution addresses the core problem statement and implements the key functional requirements.
3. All source files, configuration files, and setup instructions needed to run the application are included.
4. The code repository is maintained in GitHub for version control and submission.

Solution Summary

Field	Details
Repository Link / URL	https://github.com/pravin3213n-boop/comiccraft
Programming Language(s)	Python, JavaScript, HTML, CSS
Framework(s) Used	FastAPI, Uvicorn, Jinja2
Key Features Implemented	AI-powered comic story creation using Gemini Models; story generation, comic panel/layout generation, image generation, preview and PDF export.
Pending / Incomplete Features	Optional future enhancements: expanded image-generation providers, richer comic layouts, additional export formats, multilingual support and advanced customization.
Setup / Run Instructions	Create virtual environment; install requirements.txt; add GEMINI_API_KEY to .env; run the FastAPI application with Uvicorn.

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

ComicCraft is implemented as a FastAPI web application with modular Python AI components and a responsive HTML/CSS/JavaScript interface. The project contains source code, configuration, templates, static assets, AI integration modules, layout/export components, and setup documentation. Gemini Models are used to power AI-based comic story creation and related generation workflows.
